February was another month of strong gains in most share markets as they recovered from the sharp selloff experienced in December 2018. In these volatile times it is critical to recognise that investing should always be done with a longer term time horizon in mind.

## Cumulative Real Returns\*

Log scale, 1 January 1900 = 100

\* Annual inflation data interpolated prior to 1948

\*\* Equities is market capitalisation-weighted portfolio of top 100 to 1979 spliced with All Ordinaries from 1980, bonds is total return on 10 year or closest available bond, bank deposits is 3-year term deposit or closest comparable rate

Sources: ABS; ASX; Butlin, Hall & White (1971 & 1973); Foster (1996); Lamberton (1958); League of Nations Yearbooks; RBA; Refinitiv; Sydney Stock Exchange

The above chart from the Reserve Bank of Australia show the cumulative real returns (that is returns without the effect of inflation) for shares, bonds and cash going back to 1900. It's clear that investing in shares is the best way to grow real wealth above the rate of inflation over time. It's also clear that the share market delivers these good returns with a considerable amount of volatility. The chart below shows the share market and the various "crashes" and "crisis" we have experienced over the years.

Source ASX

Despite these episodes of volatility, the market has grown strongly over time. Staying the course with a predetermined investment strategy is generally the best approach for most investors. Avoiding becoming too despondent when markets fall as they did in December 2018, or too euphoric when share markets rally, as they did in February this year is important to growing wealth over time.

In Australia, a move by the authorities to lower interest rates is looking more likely with a number of bank economists now calling for 1-2 interest rate cuts over the course of the next 12 months. This should provide some support to Australian bond and share markets over the coming year.

International shares have also rallied materially in the past two months following the selloff in December. The lower A\$ has also helped returns for investors in international shares who did not hedge their currency exposures.
